A MODIFICATION OF THE MOON FACE EARLY WARNING RADAR HAS BEEN IDENTIFIED ON GROUND PHOTOGRAPHY AT THE TA-KU AIR WARNING RADAR FACILITY (38-59N, 117-42E) ON THE COAST SOUTHEAST OF PEKING. THE MODIFIED RADAR HAS SIX ROWS OF HORIZONTAL MEMBERS CONTAINING DIPOLES. THE HORIZONTAL MEMBERS ARE MOUNTED ON A ROTATABLE FRAMEWORK, SIMILAR TO THE MOON FACE. HOWEVER, THE HORIZONTAL DIPOLE SUPPORTS ON THE MODIFIED RADAR ARE GROUPED IN THREE PAIRS, 45, 31, AND 17 FEET LONG, AND MOUNTED IN A PYRAMIDAL SHAPE. ON THE MOON FACE THE DIPOLE SUPPORTS ARE ALL 31 FEET LONG. THE SPACING BETWEEN EACH ROW OF DIPOLE SUPPORTS ON THIS RADAR IS ABOUT 4 FEET, WHICH IS A SLIGHTLY CLOSER SPACING THAN ON THE MOON FACE RADAR.
